

# System Lifecycle Management

## Syndeia™ for MBSE *(formerly SLIM)*

No Magic World Symposium  
Allen TX, Jun 9, 2015

**Manas Bajaj, PhD**

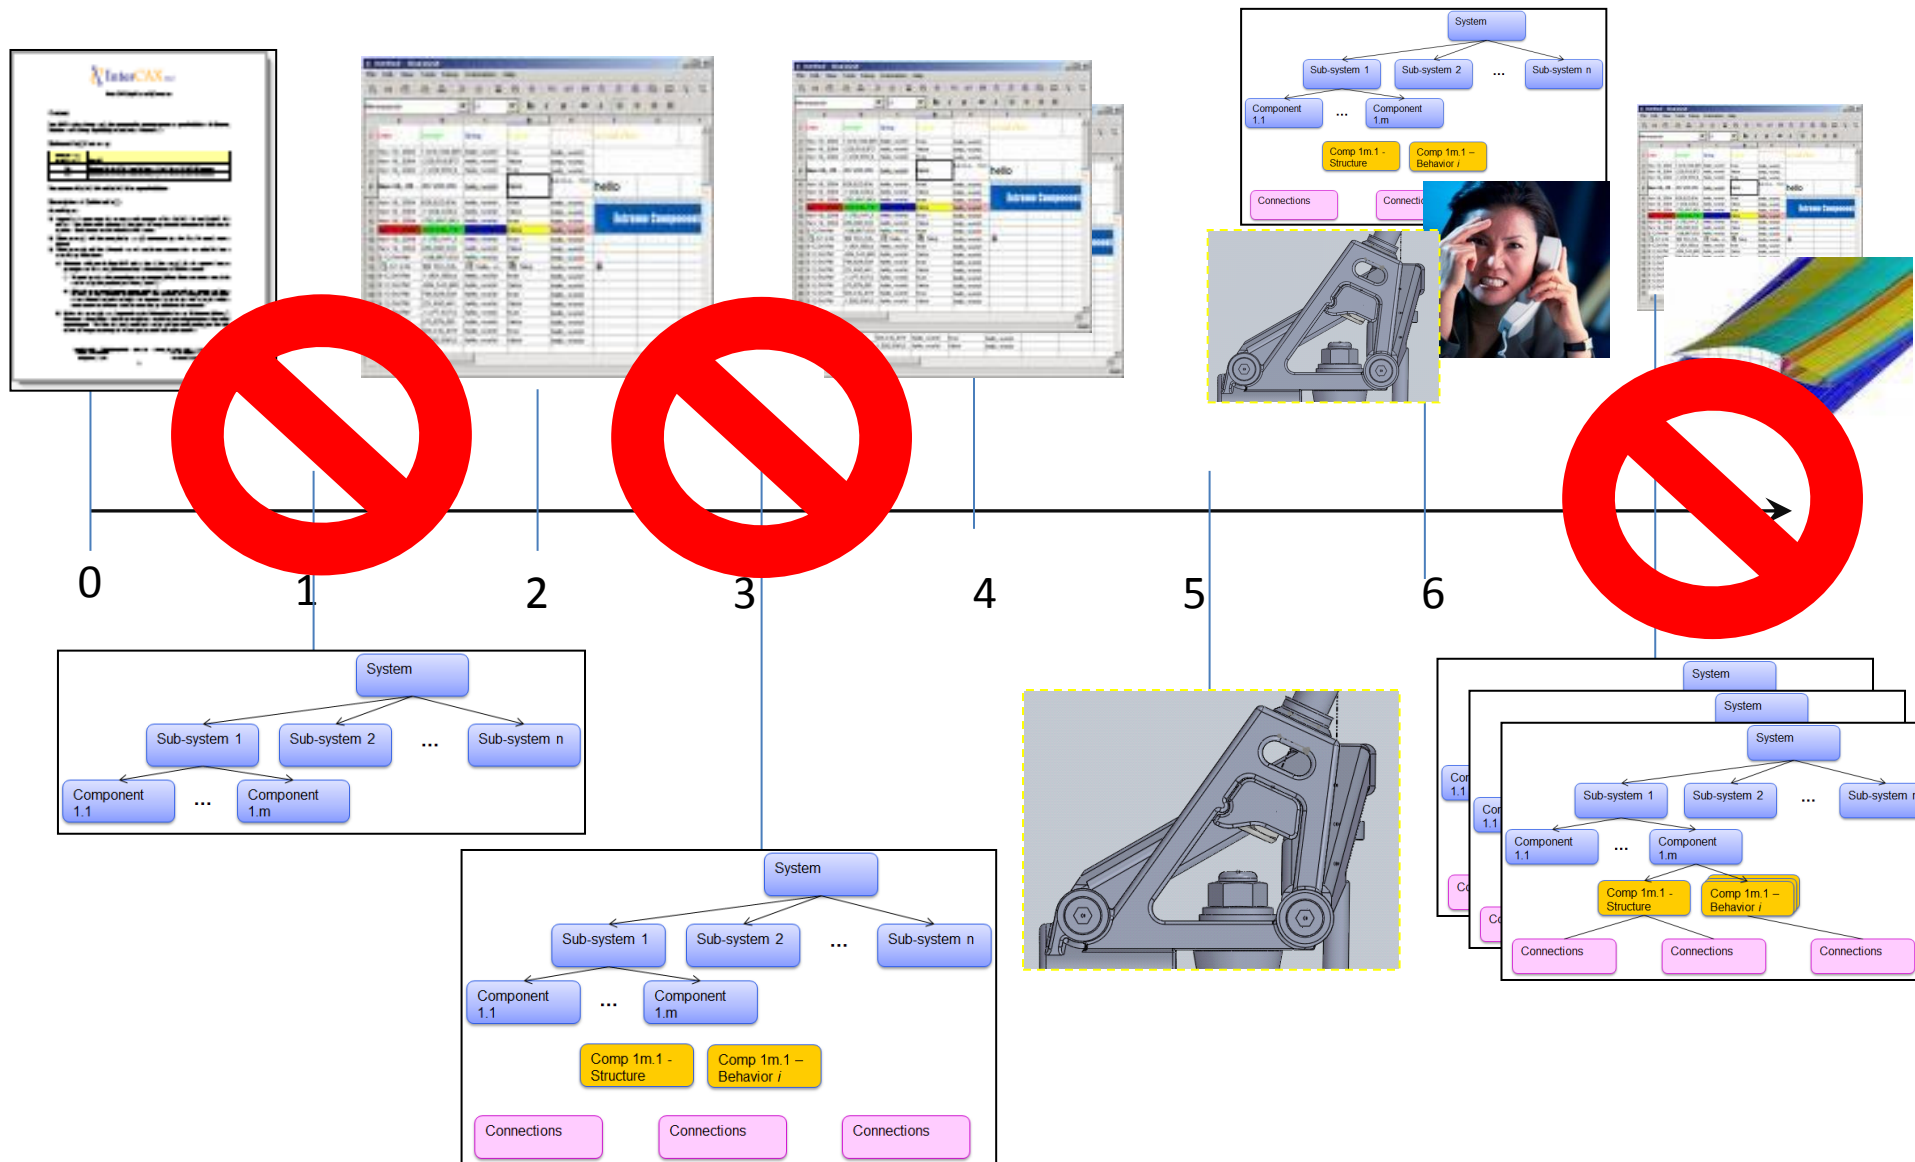

Chief Systems Officer  
[manas@intercax.com](mailto:manas@intercax.com)

[www.intercax.com](http://www.intercax.com)

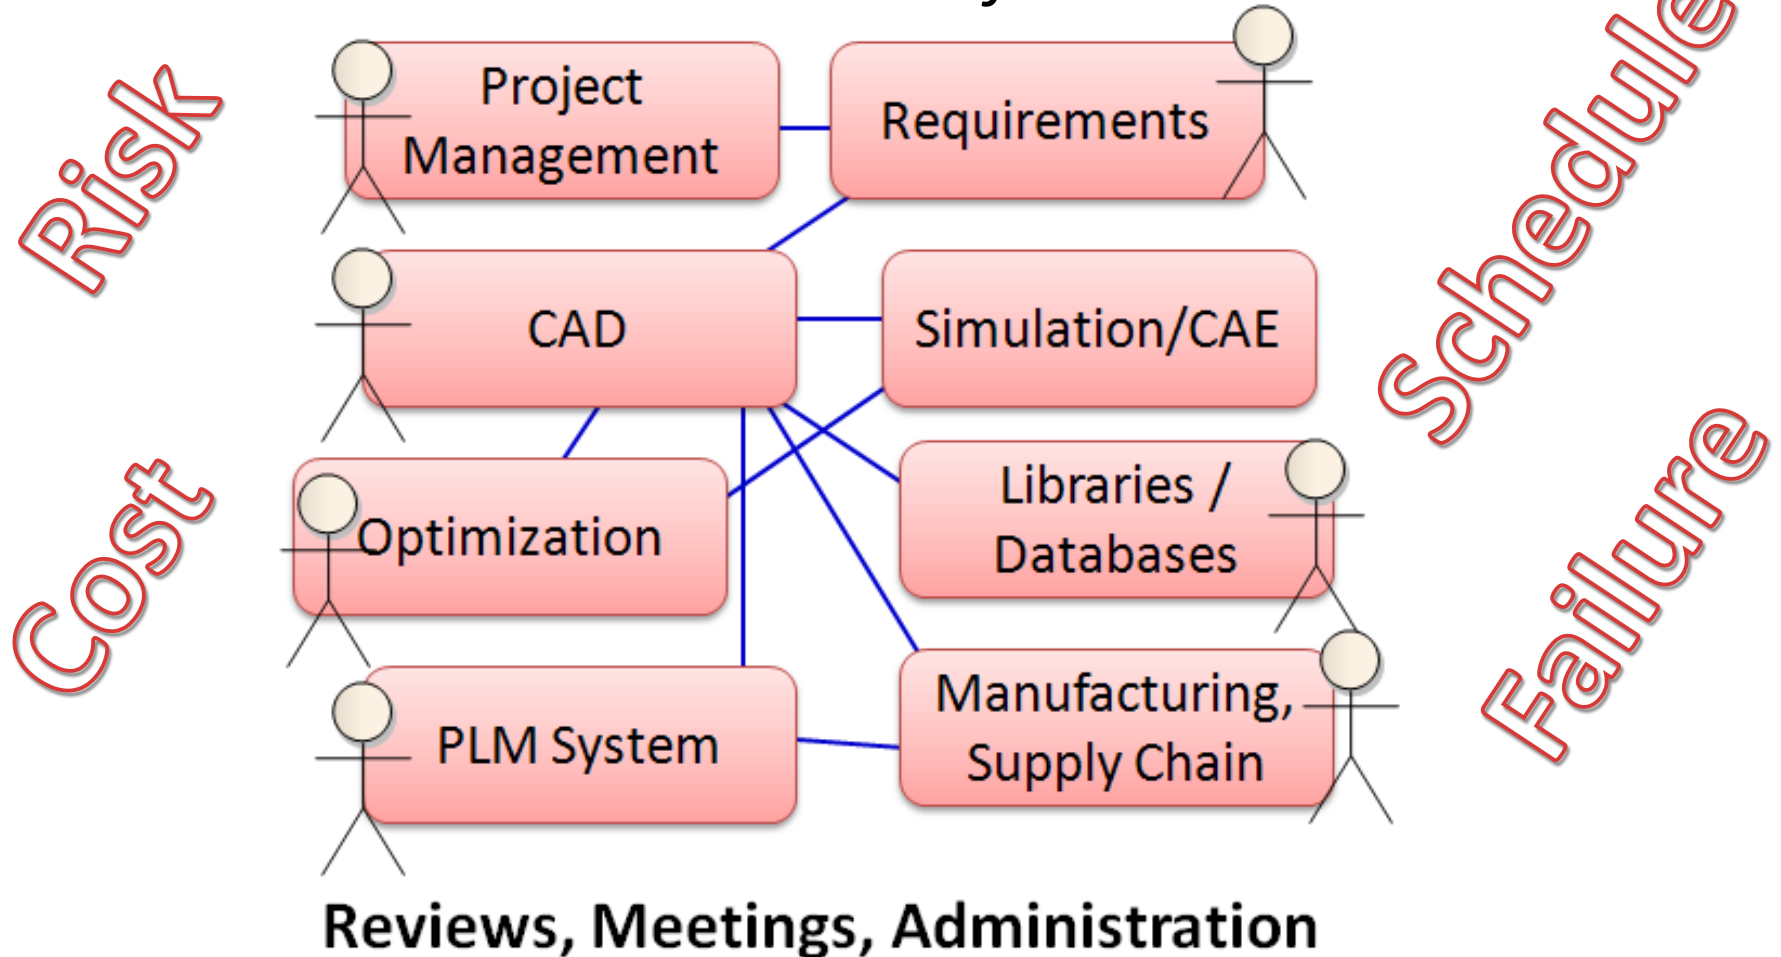

- Commercial spin-off from Georgia Tech in 2008
- Located in Atlanta, GA
- SysML-Centric Model-Based Systems Engineering
- InterCAX business model
  - Standard software products for systems engineering
    - Parametric Solvers (e.g. ParaMagic for MagicDraw)
    - Syndeia (formerly SLIM) – PLM/CAD/CAE Integration
  - Training, consulting and custom development
- Government customers: NASA, DoD, DoE
- Corporate customers: primarily defense, aerospace, automotive, transportation, consumer goods, energy

# A week in the life of a system engineer

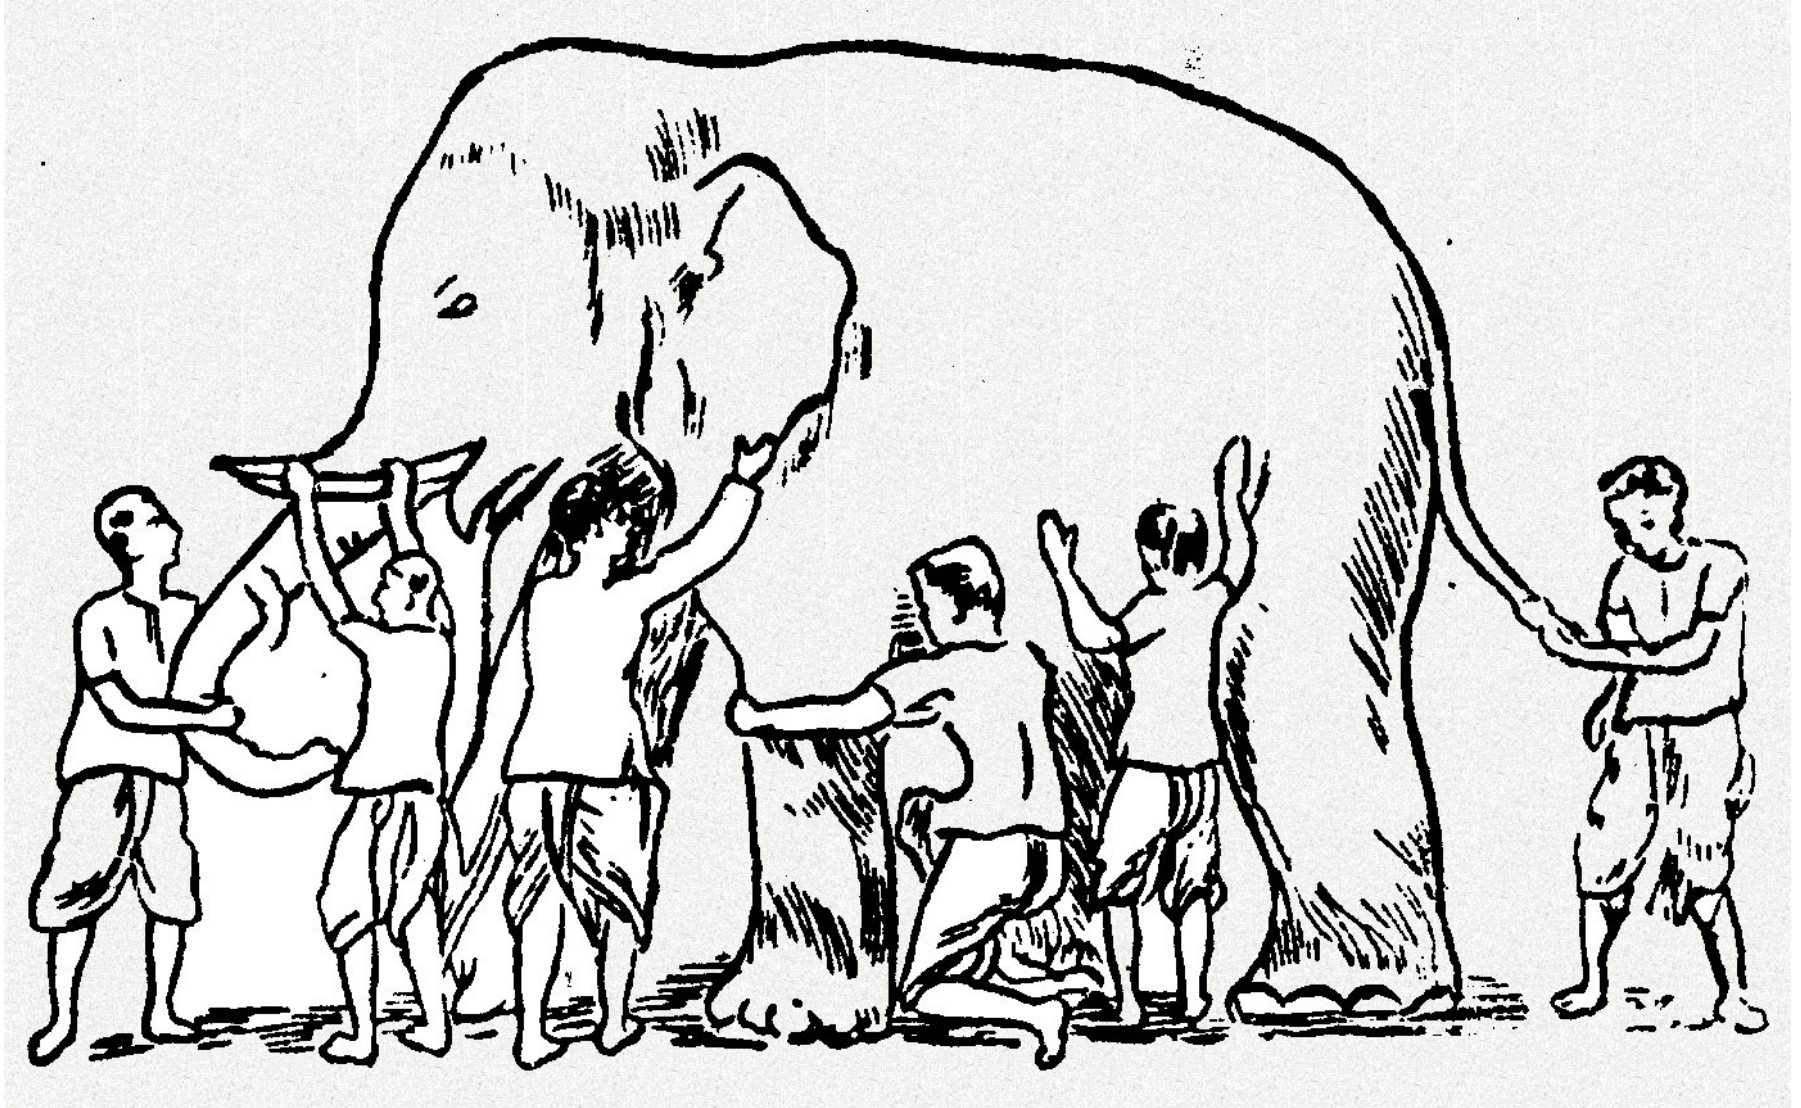

# Challenge

*Point-to-Point Ad-Hoc Information Flows*

Use of models in systems engineering **IS NOT** model-based systems engineering (MBSE)

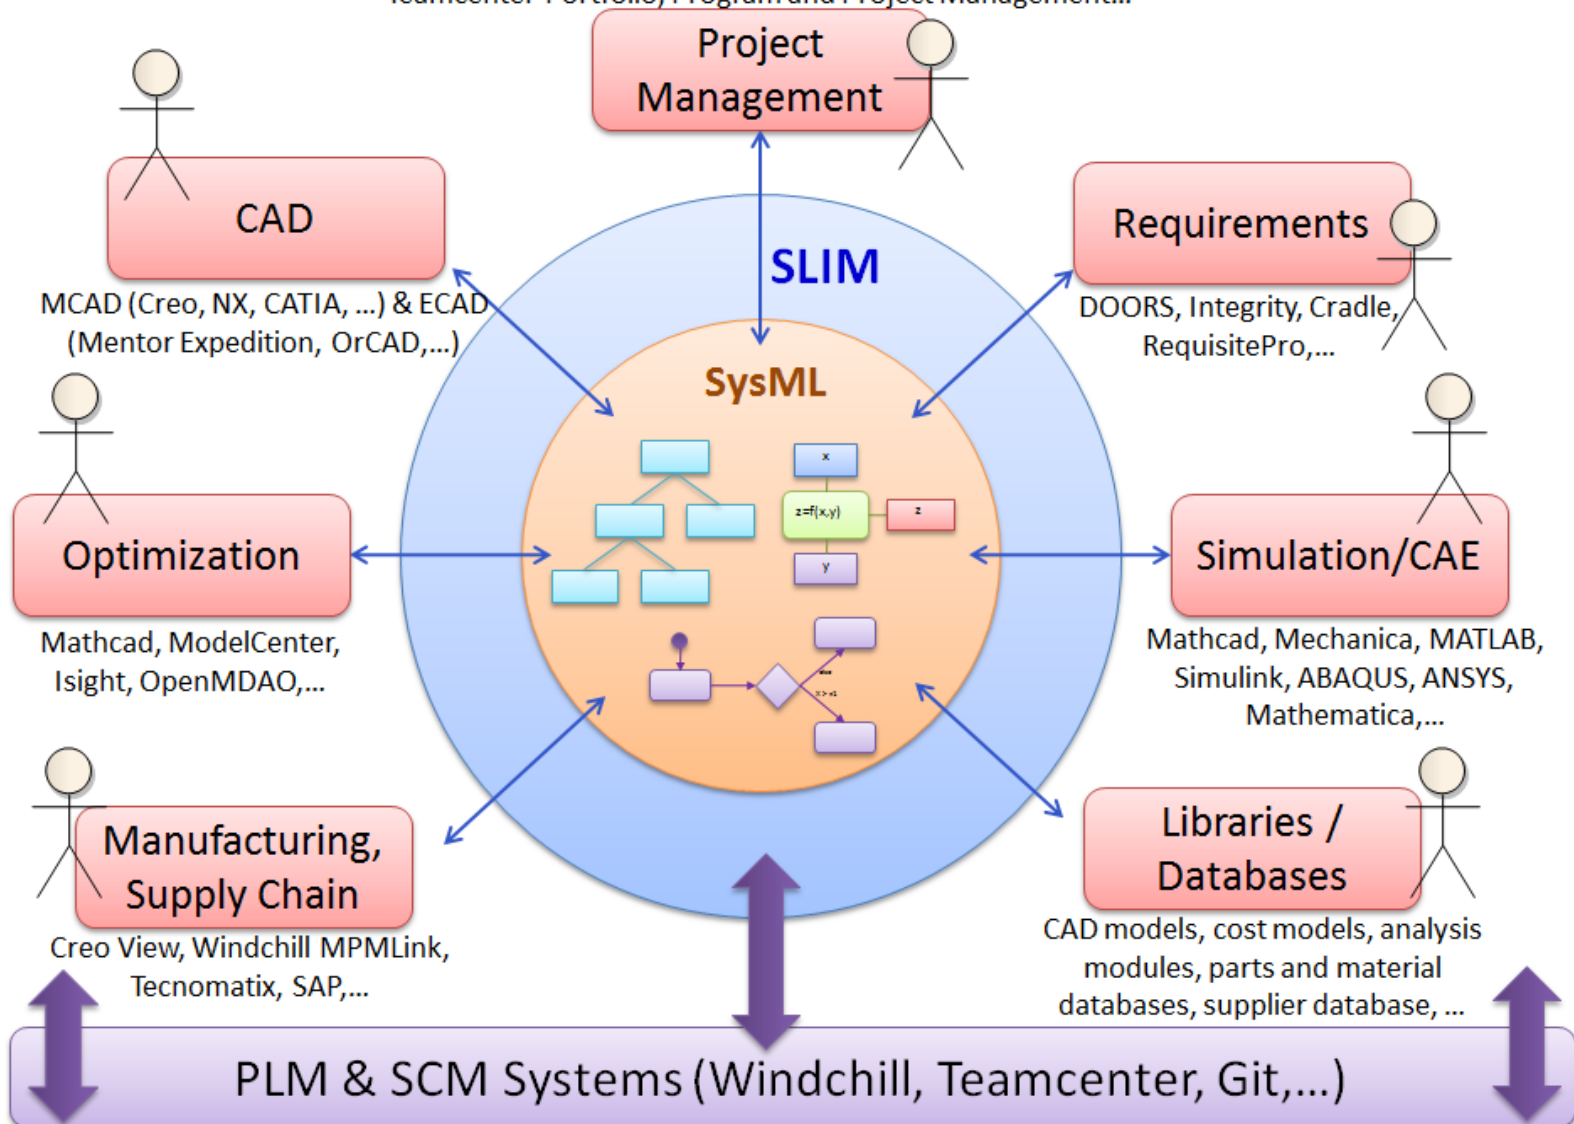

Wait, wait, don't tell me...  
It is a **rope**, It is a **wall**, It is a **pillar**....

# System Lifecycle Management (SLIM)

## *Enabling Model-Based Systems Engineering*

Primavera, MS Project, Windchill ProjectLink and PPMLink,  
Teamcenter Portfolio, Program and Project Management...

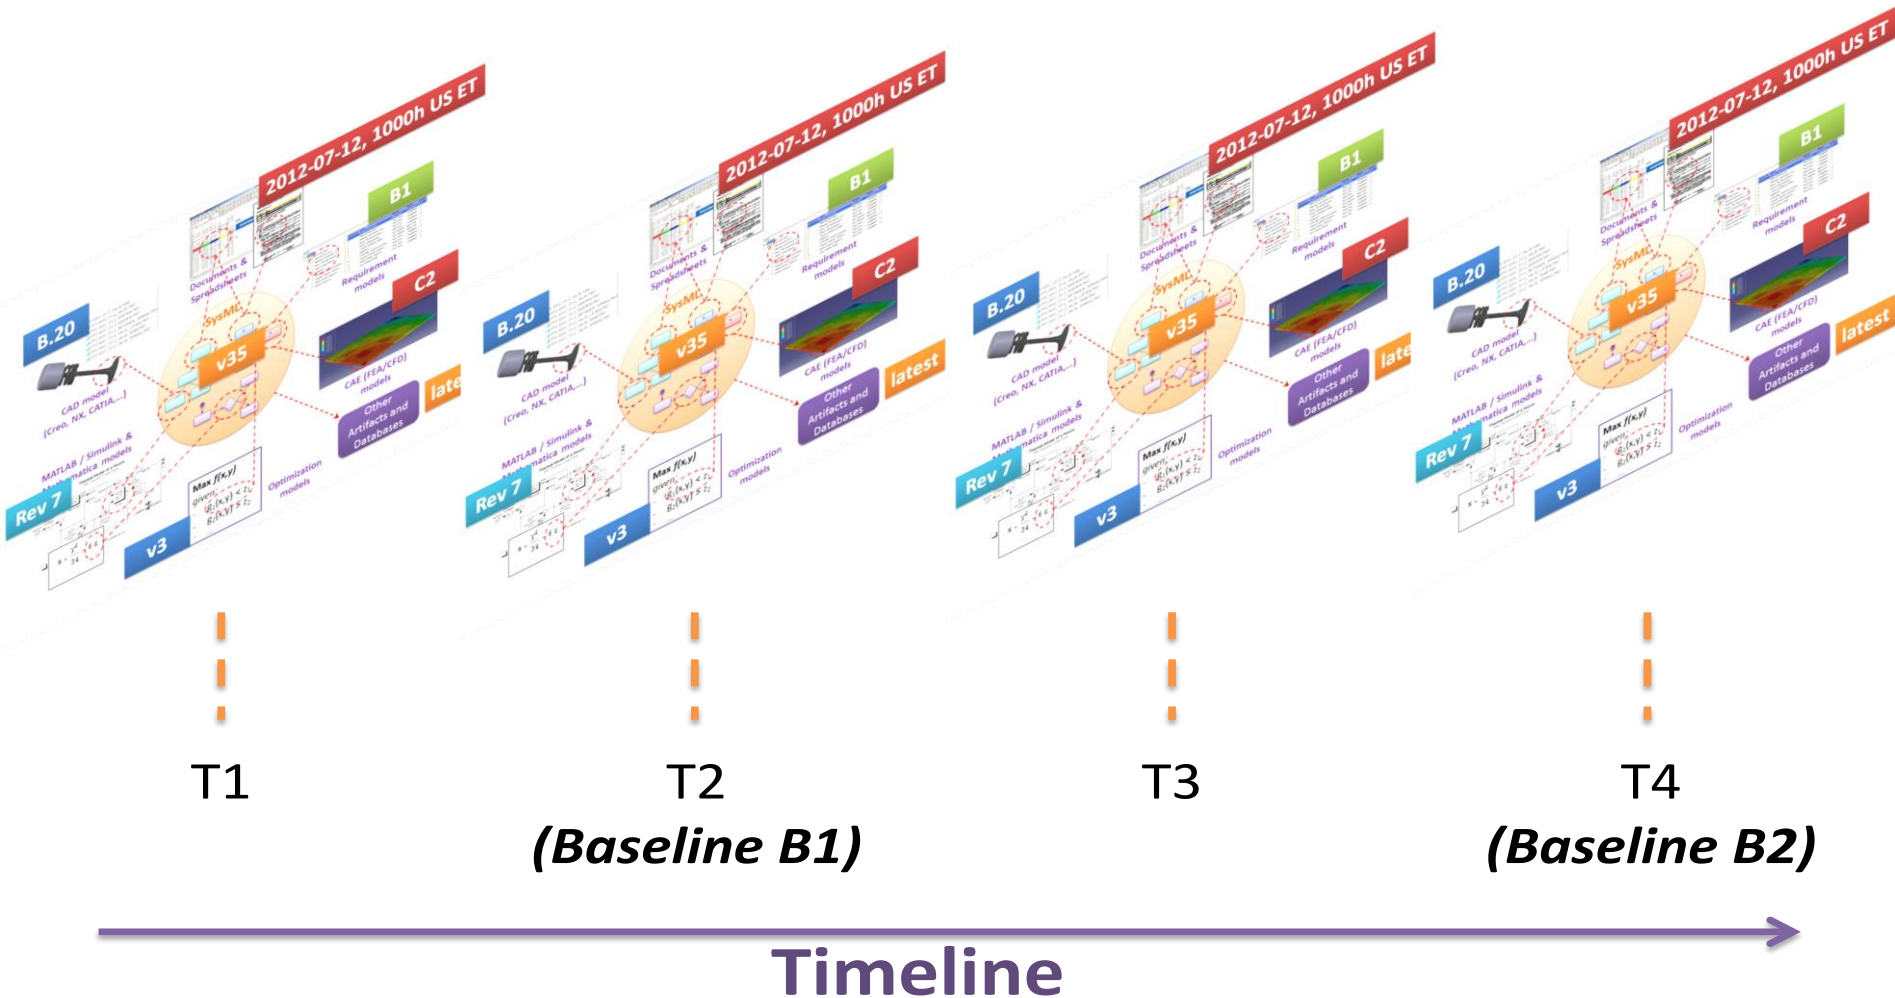

The diagram illustrates the integration of PLM & SCM systems. At the center is a blue circle labeled 'SysML' and 'SLIM'. Surrounding this hub are seven domains, each represented by a pink box with a stick figure icon and a list of associated tools or languages:

- CAD**: MCAD (Cros, Nix, CATIA, ...) & ECAD (Allegro, EPLAN, ...) & GD&C (Aluminum extrusions, GD&C, ...)
- Project Management**: (No specific tools listed)
- Requirements**: DOQML, Linging, Cradle, RequirementsML
- Simulation/CAE**: Simulink, Mathematica, MATLAB, Matlab, ANSYS, ANSYS, Mathematica, ...
- Libraries / Databases**: CAD models, cross models, analysis models, parts and material database, supplier database, ...
- Manufacturing Supply Chain**: Crea View, Windchill MPMLink, Microsoft, SAP
- Optimization**: Mathcad, ModelCenter, OpenMDAO, ...

At the bottom, a purple bar indicates the underlying systems: 'PLM & SCM Systems (Windchill, Teamcenter, Git...)'.

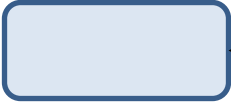

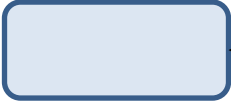

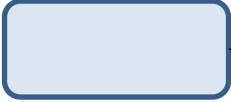

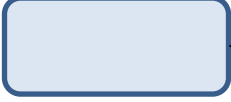

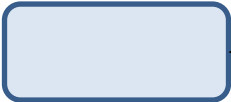

# Total System Model History

Technical Data Packages auto-generated from TSM graph

# Basic Syndeia Functions

SysML		PLM/CAD/Simulation/Db...	Description
	 <b>Connect</b>		Syndeia creates a connection between existing elements in the SysML element and repository. This may be a simple traceable link or a detailed data mapping between element attributes. These connections are stored and managed by Syndeia .
	 <b>Generate</b>		Syndeia generates an element on one side from an element on the other. SLIM manages a persistent connection between them.
	 <b>Check</b>		Syndeia checks for changes at the repository end of a connection. This may include generation of a difference report.
	 <b>Update</b>		Syndeia updates the element at one end of the connection based on the element at the other end. This may include changes in the element structure or attribute values.
	 <b>Execute</b>		Syndeia triggers execution of an element (e.g. a MATLAB function) managed in the repository as part of a SysML model execution.

# Hello Syndeia !

Demonstrate as a plugin for  
MagicDraw

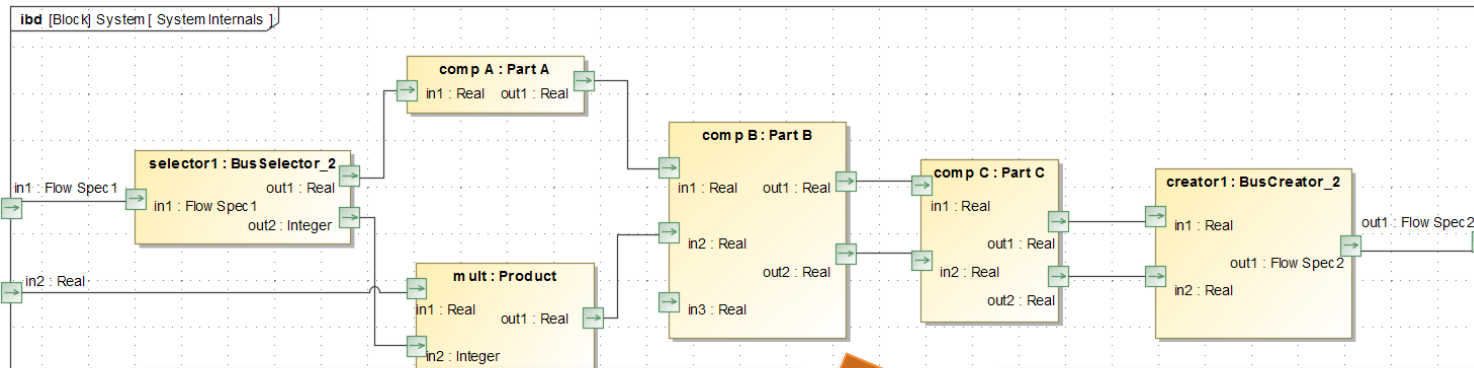

# Hello Syndeia ! – Demo Part 1

- Launch SLIM
- Connect and view
  - Windchill
  - Teamcenter
  - MySQL
  - Local File System
- Search
- Open

# Hello Syndeia ! – Demo Part 2

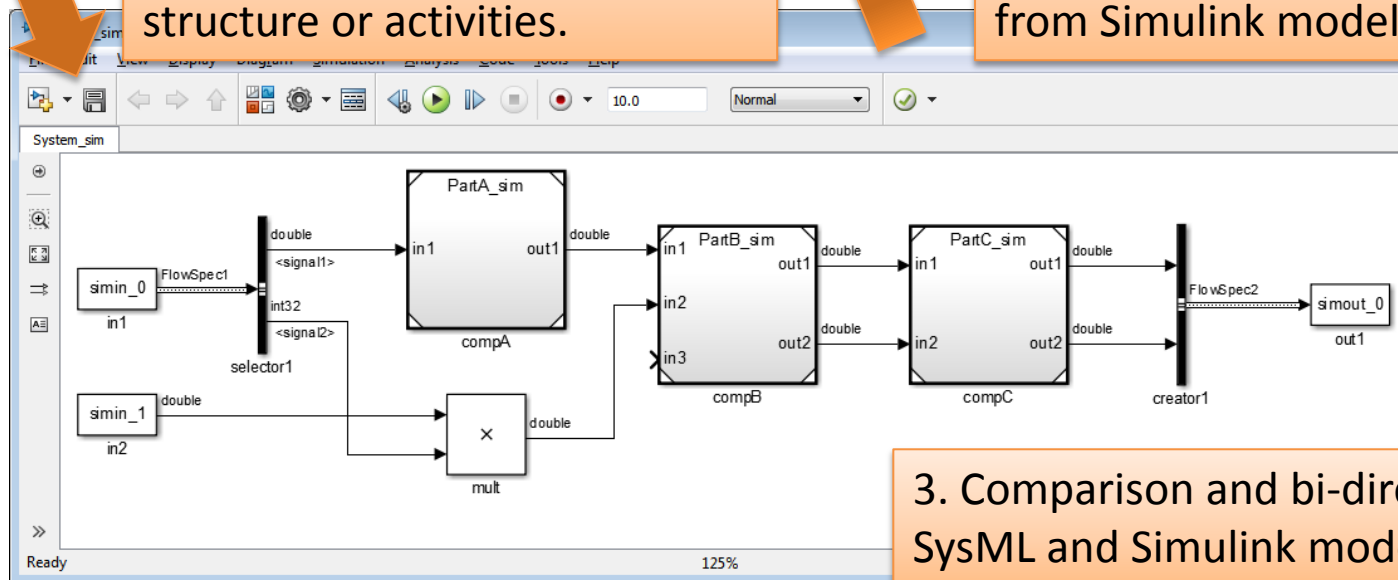

- Story of Sam Video
  - Generate TC requirements from SysML
  - Generate SysML block structure from WC
  - Generate SysML blocks from MySQL
  - Compare and sync with WC
  - Simulink use cases and demo
  - CAD (NX and Creo) use cases and demo
  - Visualization of Total System Model

# SysML-Simulink Model Transform

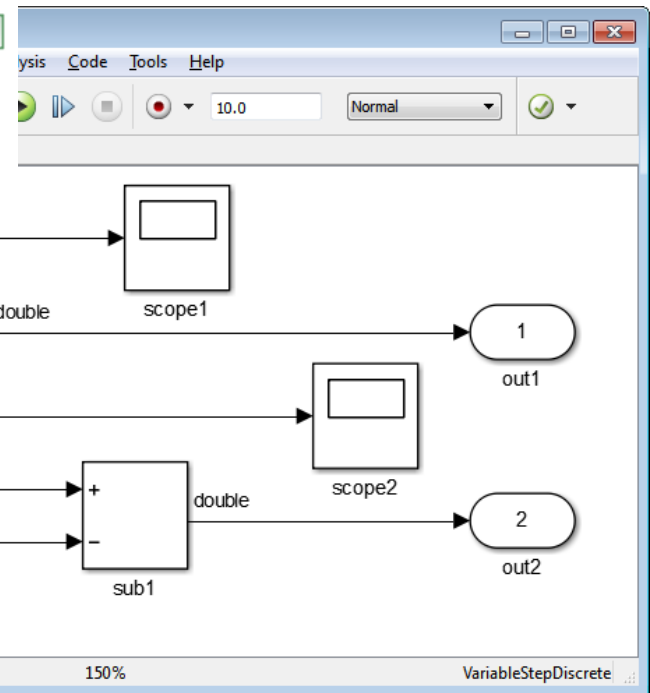

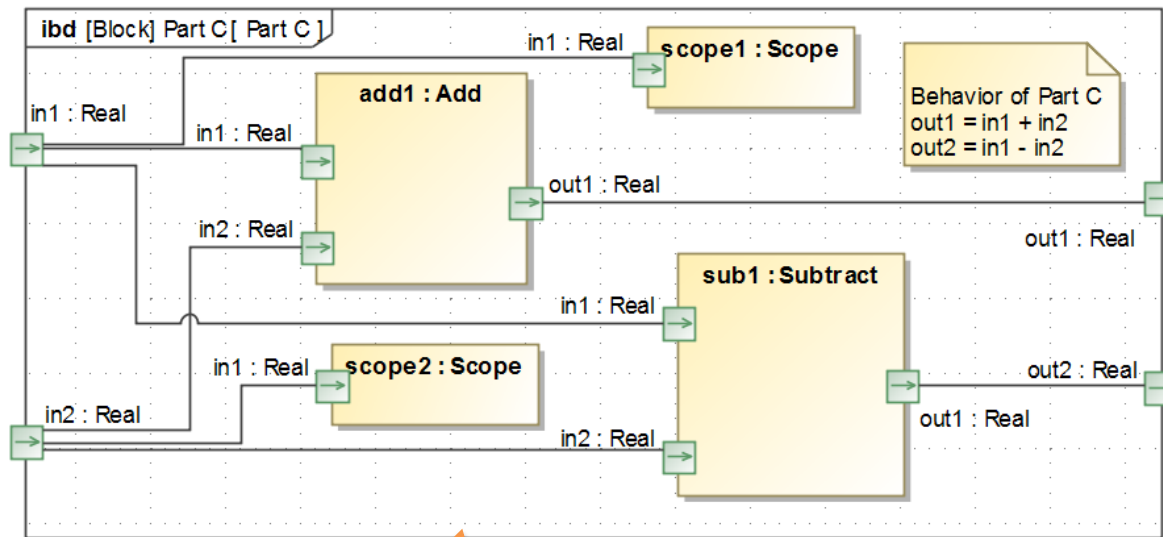

1. Generate Simulink models from SysML internal block structure or activities.

2. Generate SysML internal block structure or activity structure from Simulink model.

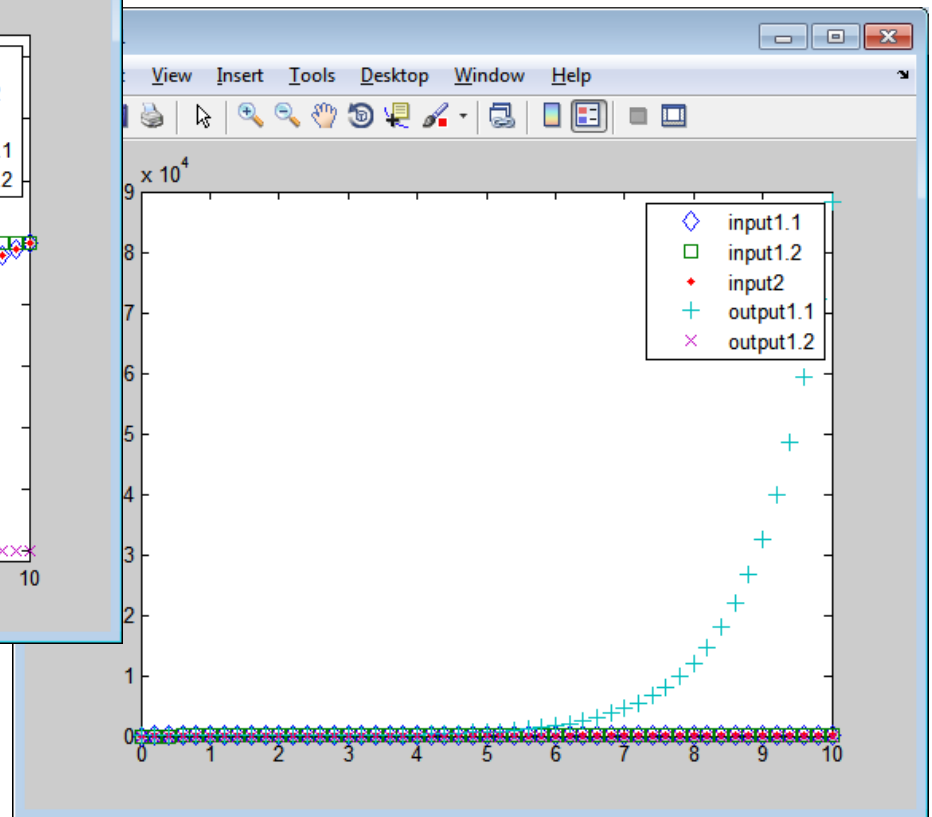

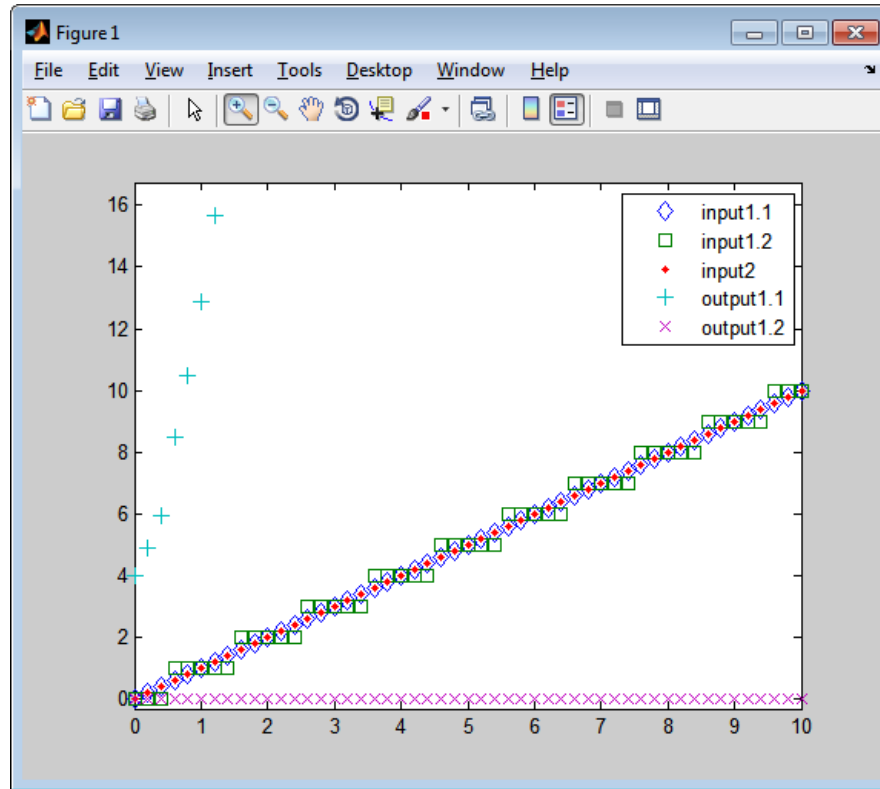

3. Comparison and bi-directional sync of SysML and Simulink models

# SysML-Simulink Model Transform

4. Use SysML blocks representing Simulink library blocks to generate fully executable Simulink model (see next slide)

# Execution of Simulink model generated from SysML

# Integrating systems modeling with CAD (1/3)

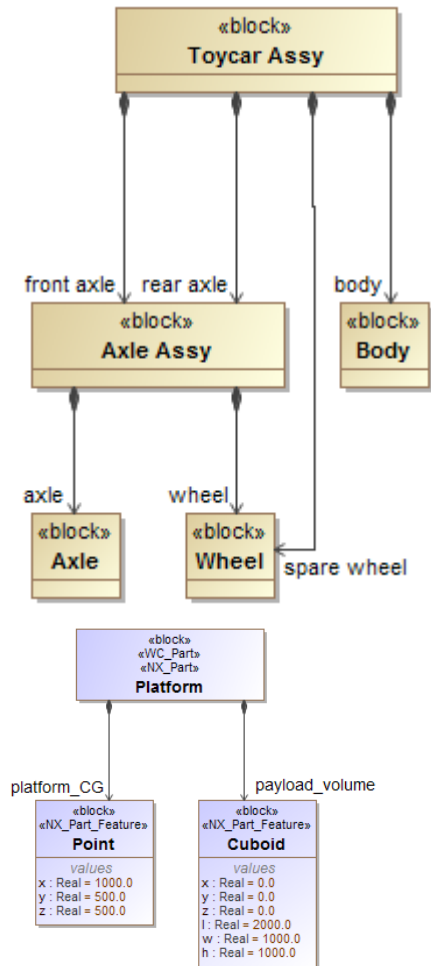

Use Case 1 – If a SysML element is connected to a CAD model, SEs can visualize the CAD model in SysML

Copyright InterCAX LLC 2014

Use Case 2 – Key geometric characteristics of a sub-system can be read in the system (SysML) model to facilitate system-level analyses, roll-ups, and requirement verification. Examples of these characteristics include mass/volume, bounding box, feature sizes, center-of-gravity, and moment-of-inertias.

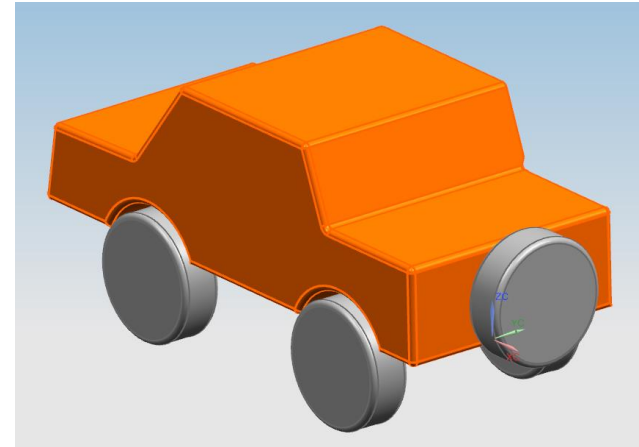

# Integrating systems modeling with CAD (3/3)

**A**

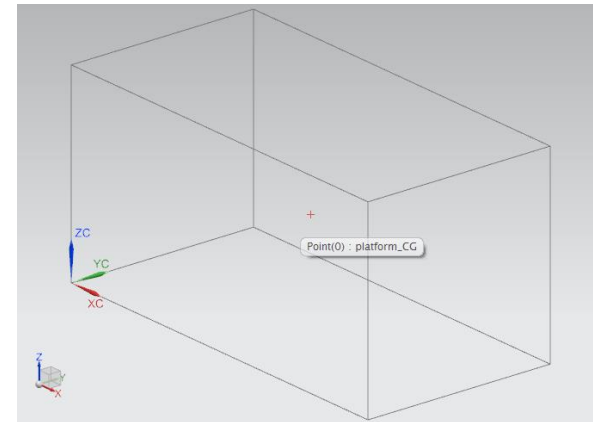

Use existing assembly definitions in your architecture

Seed system constraints (bounding boxes, keepout-zones,...) from the architecture

**B**

Use Case 3 – (A) System-level representation of hardware sub-systems can be derived from CAD models and used in the SE (SysML) model, such as for roll-ups and requirement verification, (B) System-level requirements/constraints on a hardware sub-system can be used to seed a CAD model for designers

# Syndeia 2.0 arriving Jun 29, 2015

*Build the Total System Model with  
bi-directional generate, compare, sync*

# Try out Syndeia

- Download Syndeia plugin for MagicDraw
  - Go to [www.intercax.com/slim](http://www.intercax.com/slim)
  - Follow instructions to download
  - Step-by-step tutorials to get started
- Demonstration
  - Story of Sam (INCOSE IW, Jan 2015)  
<http://goo.gl/B91MYP>

# Summary

- **Collaborative development of Total System Model**
- Concurrent in **multiple repos** - SysML, PLM, Databases
- Multiple version mgt. and config. control systems
- **Drag-n-drop** approach to connect models (usability)
- Algorithms to **compare models** and **bi-directional sync**
- **Visualization** of Total System Model
- **Parametric analyses & trades** from the TSM
- Seed **simulation** models (Simulink) from architecture
- Seed **CAD** models (NX/Creo) from system architecture
  - **Communicate requirements as geometry**

# SLIM and OSLC are Complementary

- SLIM = Software for integrated MBSE (UI + API)
- OSLC = Specs + REST API in various PLM/ALM areas
- InterCAX is a member of the OSLC working group
